

SMART SCHOOL DIGITAL CALLING SYSTEM

A professional digital communication concept for schools

PROJECT THEME

Smart Education & Digital Communication

SCHOOL NAME

Sri Gowtham CBSE School

LOCATION

Opposite to AFDT College

TEAM MEMBERS

CH. Sridhar
M. Yesu Raju
R. Mesheer

Problem Analysis

Classroom interruption

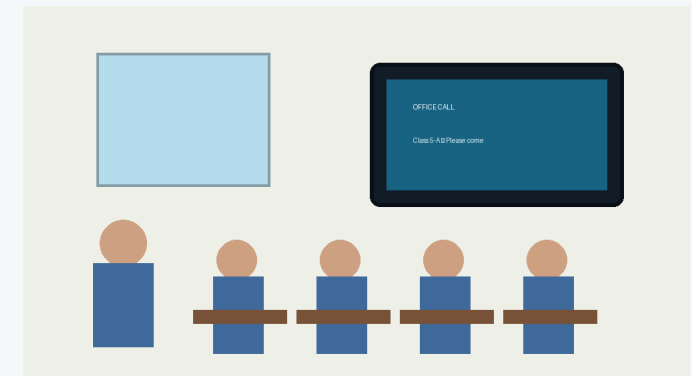

Office staff may need to enter a class to call a student or teacher.

Announcements take time

Important programs or meeting messages may need to be communicated to many classes.

Wrong-person confusion

Without a clear name, photo and class display, the requested person may be difficult to identify.

The proposed system addresses these communication gaps without interrupting the lesson unnecessarily.

Proposed Solution: Smart School Calling

Digital call → LED display → classroom alert

01 OFFICE CONTROL

The office selects a student or teacher and sends the call.

02 LED DISPLAY

The name, photo and class appear on the main display.

03 CLASS ALERT

The selected classroom receives a short notification.

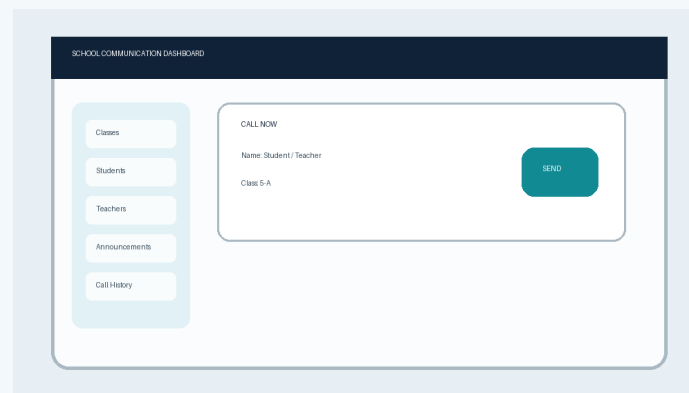

System Architecture

HARDWARE COMPONENTS

Office computer / control panel Main LED display or digital signage Classroom display or speaker Local network / Wi-Fi connection

SOFTWARE & DATA

Office dashboard Class and student/teacher database Call and announcement service Display and notification interface

Step-by-Step Working Mechanism

01 SELECT

Choose the office call target.

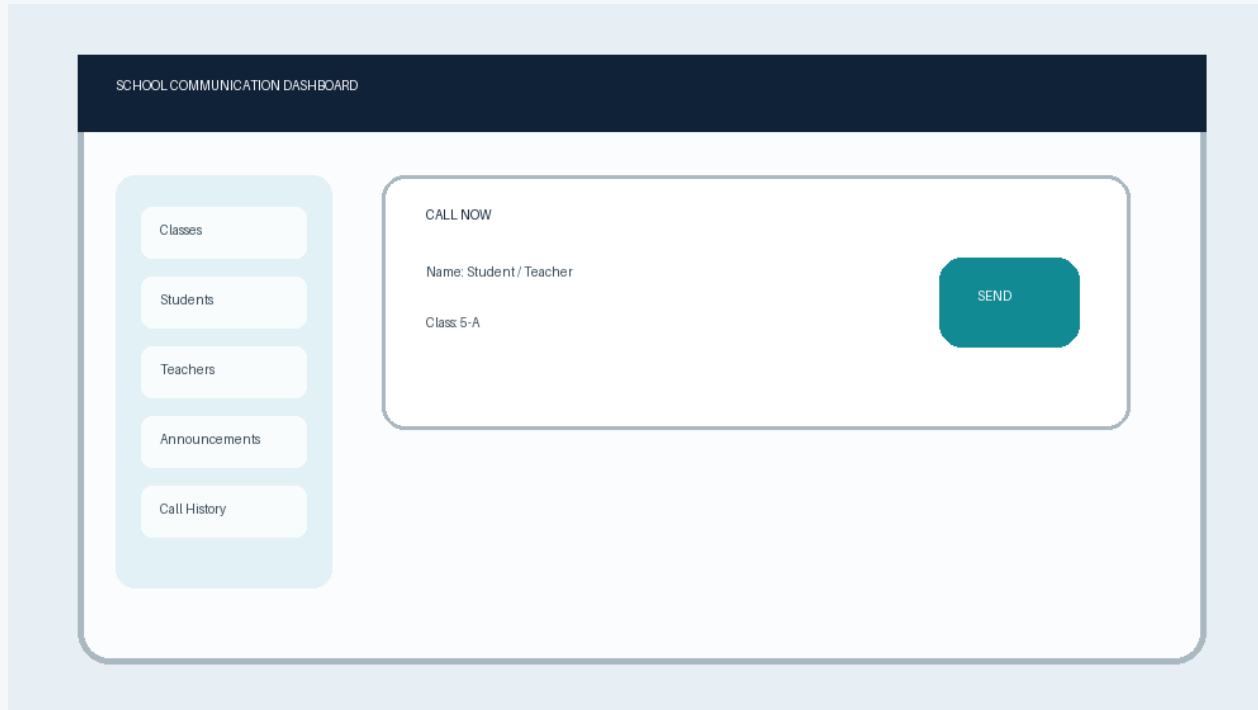

02 DISPLAY

LED shows name, photo and class.

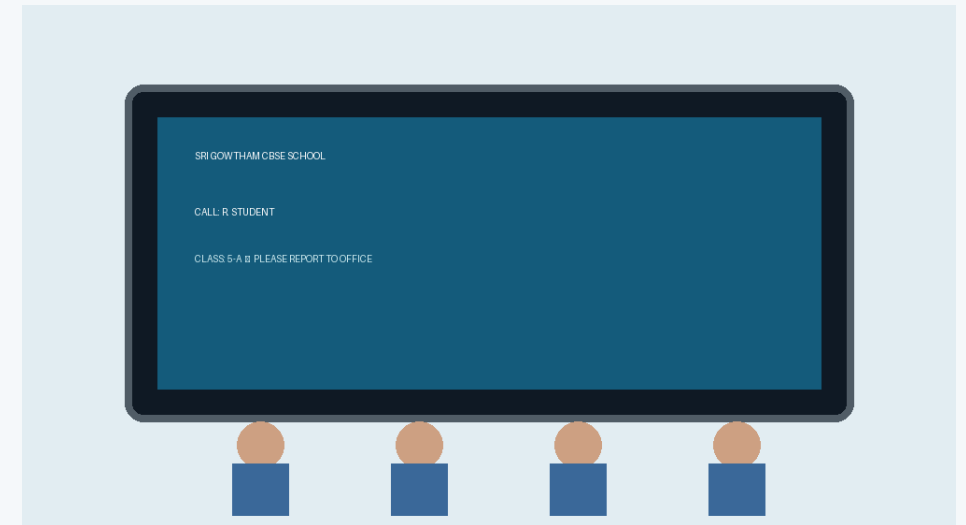

03 ALERT

Classroom receives a short notification.

Office Dashboard & LED Screen

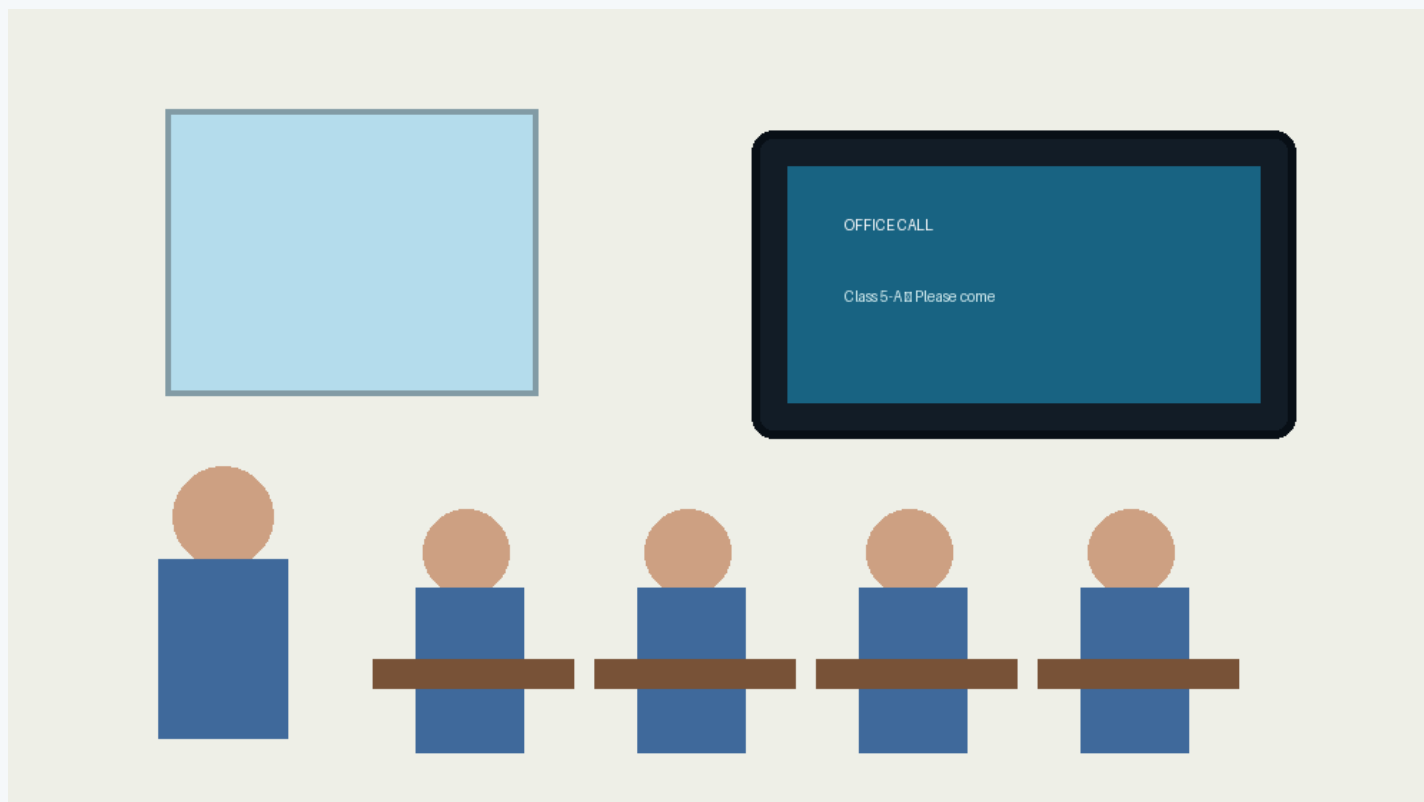

Office control concept

LED calling display concept

Classroom Experience

Clear identification

Name + photo + class make the call easy to identify.

Sound alert

A short notification tells the classroom to check the screen.

Less interruption

The teacher can continue the lesson while handling the call.

Impact & Benefits

Saves time

Reduces unnecessary walking between office and classrooms.

Less disruption

Students and teachers can be called without entering the class.

Faster announcements

Programs and important messages can reach classes quickly.

Better clarity

Photo, name and class reduce confusion.

Digital records

Call and announcement history can be stored.

Expandable

The same platform can support more classes and screens.

Future Scope & Conclusion

Future Scope

Mobile app integration, timetable-based announcements, scheduled calls, multi-screen control and emergency announcements.

Project Goal

Deliver the right information to the right person at the right time while reducing unnecessary classroom interruption.
